SUMMARY

Final-year Computer Science Engineering student and backend developer specializing in Python, FastAPI, and Django, with proven experience shipping two full-stack, production-deployed fintech and analytics platforms. Skilled in REST API design, async processing, SQL and NoSQL data modeling, ML-driven fraud and anomaly detection, and secure authentication using JWT and RBAC. Strong foundation in DSA and system design, backed by hands-on training in Python and SQL

EDUCATION

Punjab Technical University - 2022 - 2026

Bachelor of Technology in Computer Science and Engineering - Kapurthala, Punjab

EXPERIENCE

Test Yantra Software Solutions India Pvt Ltd (QSpiders CampusConnect) - Feb 2026 - Present

Trainee - Python Full Stack Developer - New Delhi

- Completed a 6-month professional training program in Python and SQL covering core language fundamentals, OOP, exception handling, file I/O, relational database design, joins, and query optimization.
- Practiced backend module development and query tuning through 15+ hands-on lab assignments and mini-projects, debugging and validating output against expected results.
- Collaborated with a peer team of 5+ trainees using Git version control and feature-branch workflows to practice industry-standard development processes.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript

Backend: FastAPI, Django, Flask, SQLAlchemy 2.0, Pydantic v2, Celery, WebSockets, JWT, RBAC

Frontend: React 18, Vite, React Router

Databases: MySQL, PostgreSQL, SQLite, MongoDB, Redis

ML/Data: scikit-learn, XGBoost, LightGBM, IsolationForest, SHAP, NumPy, Pandas

DevOps/Tools: Git, Docker, Docker Compose, Render, Vercel, Prometheus, Grafana, structlog, pytest

Domains: Backend Development, REST APIs, Distributed Systems, Microservices, DSA, OOP, Fintech Systems

PROJECTS

PayFlow - Payment Reconciliation Engine | *FastAPI, Python, scikit-learn, XGBoost, Celery, Docker* | [Live Demo](#) - [GitHub](#) - 2026

- Built an async FastAPI backend with 90+ REST endpoints across 20 modules (auth, transactions, gateways, webhooks, reconciliation, settlements, fraud, ledger) using a layered API-Service-Repository architecture.
- Designed a 4-source reconciliation engine (internal database, gateway, settlement, bank) that classifies 8 discrepancy types with confidence scoring and audit trails, plus a Stripe, Razorpay, and PayPal webhook pipeline with HMAC signature verification and retry logic.
- Engineered a fraud-detection ensemble combining Isolation Forest, Random Forest, XGBoost, and LightGBM over 17 engineered features, merged with impossible-travel, velocity, and 7 rule-based checks into a single risk score.
- Implemented JWT authentication, role-based access control, WebSocket pub/sub across 5 channels, and 40+ Prometheus metrics; automated background jobs with Celery and Redis, deployed via Docker Compose, and validated with 14 pytest tests.

InferSight - AI-Powered Analytics Platform | *FastAPI, React, TypeScript, SQLAlchemy 2.0, PostgreSQL* | [Live Demo](#) - [GitHub](#) - 2026

- Developed a full-stack SaaS analytics platform (FastAPI, React 18, TypeScript) that ingests time-series data and delivers forecasting, anomaly detection, AI insights, and natural-language question answering through an interactive dashboard.
- Delivered holdout-scored forecasting (linear regression, exponential smoothing, and Holt's method) and robust rolling z-score anomaly detection in NumPy and Pandas, plus a rule-based insight engine with optional LLM enrichment.
- Secured the platform with JWT authentication, rotating single-use refresh tokens, bcrypt password hashing (12 rounds), per-user data isolation, granular permissions, and audit logging across 30+ API endpoints.
- Created custom zero-dependency SVG chart components, a Celery Beat alerting and escalation pipeline, and CSV, XLSX, and PDF report export; verified with a 107-case automated test suite and strict TypeScript CI checks.

CERTIFICATIONS

Python and SQL Professional Course – QSpiders; **AI in Fintech Essential Training**; **Cyber Awareness AI Basic** – NIIT Foundation; **Core Java** – Internshala

ACHIEVEMENTS

Competed in AMD AI Premier League (AAIPL) at IIT Delhi (Track 1); built an LLM-based Q&A agent using prompt engineering, placing among 170+ teams from across India.

Solved 100+ LeetCode problems in Python across Dynamic Programming, Backtracking, Sliding Window, Greedy, and String algorithms.
